# Small Instrumentation Modules

SIM914 — 350 MHz preamplifier (2-channel)

- · DC to 350 MHz bandwidth
- · Two independent amplifier channels
- · Voltage gain of 5 (14 dB) per channel
- · 6.4 nV/√Hz input noise
- · 3 ns overload recovery
- · Excellent phase linearity

SRS SIM914 Dual

· SIM914

### SIM914 Dual 350 MHz Preamplifier

The SIM914 350 MHz preamplifier contains two widebandwidth, DC-coupled amplifiers, each with a gain of 5 (14 dB). Its fast rise time, low noise, and excellent DC accuracy make it an ideal instrument for amplifying signals like those from photomultiplier tubes and photodiodes.

The gain stages of several SIM914 can be cascaded without creating oscillation problems. Input clamping gives a 3 ns recovery time from a 10× overload.

Wide bandwidth, along with 50  $\Omega$  input and output impedance, ensures a linear phase response across the entire frequency range, preserving pulse shapes.

#### **SIM914 Specifications**

Amplifier channels Inputs, outputs

 $50\Omega$ , DC coupled Bandwidth DC to 350 MHz (1 ns rise/fall time)

Voltage gain 5 per channel (14 dB) Input noise  $6.4\,\mathrm{nV}/\mathrm{VHz}$  (typ.)

Operating range  $\pm 200 \,\mathrm{mV}$  (inputs),  $\pm 1 \,\mathrm{V}$  (outputs)

Propagation delay 2.7 ns (typ.)

Recovery time 3 ns for 10× overload Input protection  $\pm 50\,V$  for <1  $\mu s$ 

Output clamp  $\pm 1.6\,V$ Output overload detect ±1.3 V Crosstalk  $-60 \, \mathrm{dB}$ 

0°C to 40°C, non-condensing Operating temperature Connectors BNC (4 front), DB15/M SIM interface Powered by SIM900 Mainframe, or Power

external DC supply (+5 V)

Dimensions, weight  $1.5" \times 3.6" \times 7.0"$  (WHD), 1.4 lbs. Warranty One year parts and labor on defects

in materials and workmanship
