Lock-In Preamplifier

SR555 — *Current preamplifier*

- · 10 V/µA fixed gain
- · 120 kHz bandwidth
- · Bias voltage input
- Powered by SRS lock-in amplifiers

· SR555

The SR555 is a low-noise, high-bandwidth, fixed-gain current (trans-impedance) amplifier designed to work with SRS lockin amplifiers. Current amplifiers provide gain close to the experimental detector, allowing the user to minimize input cable length and its corresponding input capacitance. The SR555 minimizes noise and pickup before they permanently degrade the signal-to-noise ratio, reducing measurement time in noise-limited experiments. Power is brought from the lock-in by a 9-pin cable. The SR555 can also be operated independently by applying the appropriate DC power.

SR555 Specifications

 $10^7 \, \text{V/A}$ Gain Bandwidth 120 kHz (-3 dB) Input noise (typ.) 42 fA/√Hz at 1 kHz

Current input

<50 Ω Impedance Bias current <3 pA

DC bias input

Range ±5 VDC Settling time <150 ms Impedance $1 M\Omega$ Gain accuracy 1%

 $\pm 50\,ppm/^{\circ}C$ Gain stability

20 Vpp max. balanced differential Output

 $10 \text{ mA max.}, 50 \Omega$

Supplied by SR510, SR530, SR810, Power

SR830, SR850 or SR124 via

control cable

Mechanical $3.0" \times 1.3" \times 5.1"$ (WHD)

Weight

Warranty One year parts and labor on defects

in materials and workmanship
